$\qquad$

## The Combined Gas Law

- Expresses the relationship between the $\qquad$ and
$\qquad$ of $a$ $\qquad$ amount of $\qquad$ .
or

Ex: A sample of gas has a volume of $\qquad$ $L$ when its temperature is $\qquad$ K and its pressure is $\qquad$ mm Hg . What volume will the gas occupy at STP?
$V_{1}=$ $\qquad$ $V_{2}=$ $\qquad$
$\mathrm{T}_{1}=$ $\qquad$ $\mathrm{T}_{2}=$ $\qquad$
$P_{1}=$ $\qquad$
$P_{2}=$ $\qquad$

## Diffusion

- The $\qquad$ spreading of a $\qquad$

## Graham's Law of Diffusion

- Under the same conditions of $\qquad$ and $\qquad$ gases
$\qquad$ at a rate $\qquad$ proportional to the $\qquad$
$\qquad$ of their $\qquad$ (or $\qquad$
$\qquad$ or

## Ideal Gas Equation

- 
- New variables:

```
\(n=\) of gas in
``` \(\qquad\)
```

$\mathrm{R}=$

``` \(\qquad\)
``` * constant
* value depends on
``` \(\qquad\)
``` used for
``` \(\qquad\)
``` and
``` \(\qquad\)
```

* value of $R$ when using

``` \(\qquad\)
``` and
``` \(\qquad\)
``` , \(R=\)
``` \(\qquad\)

Ex: The average lung capacity for a female student is 3.9 L . At normal body temperature, \(37^{\circ} \mathrm{C}\), and 110 kPa , how many moles of air could her lungs hold?
\(P=\) \(\qquad\)
\[
V=
\]
\(\qquad\) \(T=\) \(\qquad\)
\(n=\) \(\qquad\)
\(R=\) \(\qquad\)

\section*{Avogadro's Law}
- Equal \(\qquad\) of different \(\qquad\) under the \(\qquad\) conditions have the \(\qquad\) number of \(\qquad\) .
- Conversely, if samples of \(\qquad\) at the same
\(\qquad\) and \(\qquad\) contain the \(\qquad\) number of
\(\qquad\) then the \(\qquad\) of all the \(\qquad\) must be
\(\qquad\)
- \(A \dagger\) \(\qquad\) one \(\qquad\) of any gas occupies a \(\qquad\) of \(\qquad\) .
is the \(\qquad\)
\(\qquad\) of a gas.

Ex. 3.2 moles of \(\mathrm{KNO}_{3}\) are heated, producing \(\mathrm{O}_{2}\) and \(\mathrm{KNO}_{2}\). Calculate the volume of \(\mathrm{O}_{2}\) in liters, that could be obtained at STP.

Dalton's Law of Partial Pressures
- The \(\qquad\) of a gas \(\qquad\) is the \(\qquad\) of the of each gas \(\qquad\) .
-

Ex: Oxygen gas has been collected over water at a total pressure of 95.0 kPa and a temperature of \(25^{\circ} \mathrm{C}\). What is the pressure of the dry oxygen gas?

The Chemistry Quiz
CR1. \(\qquad\) CR2. \(\qquad\) 1. \(\qquad\) 2. \(\qquad\)
3. \(\qquad\) 4. \(\qquad\) 5. \(\qquad\)
